mesh and IThread

- Supporting industrial, automotive, smart city and smart home
- Cloud agnostic – Connect with transport layer security to any cloud

Develop products with safety built in

- Long-term support
- In-depth security development lifecycle
- Functional safety certification coming soon

200+ Boards Supported

Zephyr supports more than 200 boards. Search [our list](#) for the hardware used in your application. This diversity of supported boards gives developers and product manufacturers multiple options to solve their embedded RTOS challenges with Zephyr. If your board is not supported out of the box, adding support for a new board is simple.

As a founding member of the Zephyr Project, we are excited to support this latest release that brings new feature enablement and support to our expanding portfolio of i.MX RT crossover processors. The Zephyr 1.14 LTS release provides developers a well-tested, stable foundation for immediate project start and is based on a rich, open source microcontroller ecosystem that supports exciting new applications.
